cards

Debit card
system

Our features match your needs

Versatility	■ All the makes of copier
Chip cards	■ High capacity
Leading edge technology	■ Small and cost effective system
Debit cards	■ Simple to use

Cartadis TCP2

Principle

Dedicated to management and vending of cards preprogrammed with copies, the **Cartadis TCP2** can be fitted to any make of copier. Your copier can only be used while a valid **Cartadis TCP2** card is inserted into it. The vending value is debited from the chip card in money or unit (copy) each time a copy is done.

To cope with chip cards compatibility on a same site or unacceptance of chip cards for different sites, three group numbers are stored in the **Cartadis TCP2**.

Any **Cartadis TCP2** units may be programmed, via their Master card, to accept chip cards recorded on any unit from a same group.

Cards

Cartadis TCP2 cards are credit-card sized including an electronic chip and are reloadable. These cards are supplied blank and need to be recorded with a value before use on the **Cartadis TCP2**. A card can be revalued and reused many times.

A special MASTER card gives access to a program menu for adjustment of prices, copier parameters and card recording. For control purposes, statistics can be displayed with this card.

In option, **Cartadis TCP2** may run with no contact card of "mifare®" type.

Compatibilities

▪ Cartadis TCP1,
▪ Cartadis CR3 cards reloader,
▪ Cartadis CD30 cards dispenser.

Technical features

Power supply: 24 V DC from the copier or
external PSU
Weight: 0,4 kg
Dimensions: L 140 mm - W 90 mm - H 38 mm
Display: backlighted LCD
Chip card: high scale integrated
Option: card reader for combined use of
chip and no contact "mifare®".
